

# Your health brings us together, our care sets us apart.

## **Cardiac Cath and Angioplasty**

*Dealing with the “plumbing system of the heart,” cardiac catheterization pinpoints clogged arteries. The cath lab is also where an interventional procedure (coronary angioplasty with stents) may be performed to unclog arteries (and even stop a heart attack while it is occurring).*

## **ElectroPhysiology**

*Dealing with the “electrical conduction system of the heart”, the EP Lab helps diagnose and treat abnormal heart rhythm.*

## **Cardiac Surgery**

*Two dedicated Cardio-thoracic Operating Rooms are used to correct blocked arteries and repair malfunctioning valves.*

## **ICU & PCU**

*The Cardiac Intensive Care Unit and Cardiac Progressive Care Unit offer around-the-clock care to prepare patients to go home.*

## Good for Your Heart, Close to Home
